EXERCISE 25

Using Shell Programming:

1. Read a number and find its square.

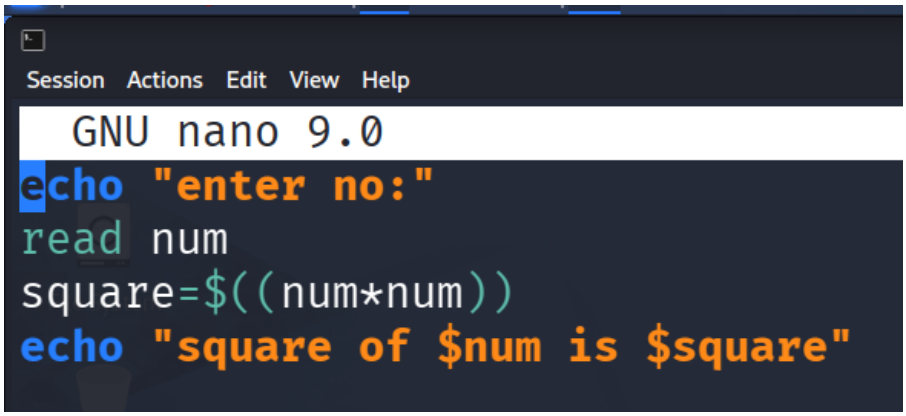

2. Find the biggest of three numbers.

Aim

To write and execute shell scripts in Kali Linux to calculate the square of a number and find the biggest among three numbers.

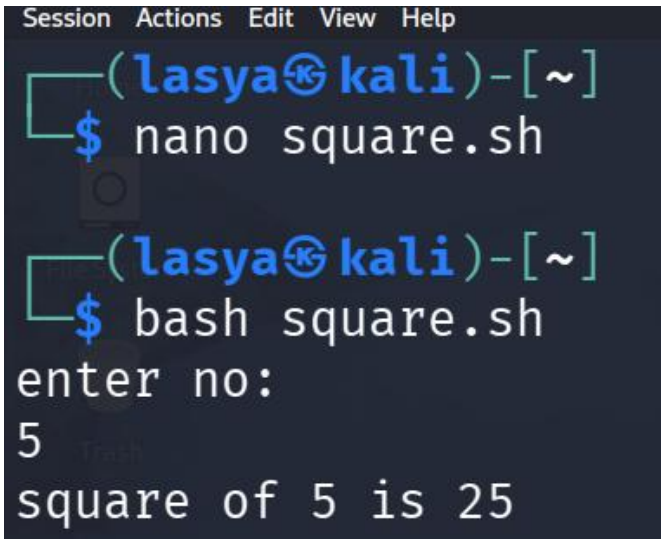

Program 1: Read a Number and Find Its Square

Program:

Use: Reads a number from the user, calculates its square using arithmetic operations, and displays the result.

Sample Output:

Program 2: Find the Biggest of Three Numbers

Program:

```
  GNU nano 9.0
echo "enter three numbers:"
read a
read b
read c
if [$a -ge $b] && [$a -ge $c];
then
echo "$a is biggest"
elif [$b -ge $a] && [$b -ge $c];
then
echo "$b is biggest"
else
echo "$c is biggest"
fi
```

Use: Reads three numbers and uses conditional statements to compare them and display the biggest number.

Sample Output:

```
┌──(lasya㉿kali)-[~]
└─$ nano biggest.sh

┌──(lasya㉿kali)-[~]
└─$ bash biggest.sh
enter three numbers:
10
25
37
biggest.sh: line 5: [10: command not found
biggest.sh: line 8: [25: command not found
37 is biggest
```

Result

Thus, the shell programs were successfully created and executed in Kali Linux. The first program calculated the square of a given number, and the second program identified the biggest among three numbers.
